

Aut-O-Safe® Lets You and Your Passengers Rest Easy

Unknowns are scary. Picture it, your building loses power—it happens. There is no emergency backup generator system—it happens. Without power the hydraulic elevator stops running. Worse, maybe there are passengers in the elevator when power fails—it happens. Now, put yourself in the shoes of your passengers. Get the picture?

Now picture the same scenario but with Aut-O-Safe installed. In the event of a power loss, Aut-O-Safe automatically operates to move the hydraulic elevator to the lowest landing and provides power to the door open button. Now your passengers can exit safely. Which picture do you prefer?

- ◆ Prevent Entrapments
- ◆ Improve Safety
- ◆ Provide Peace of Mind
- ◆ Cost Effective
- ◆ Short Installation Period

Aut-O-Safe:

- available for most Otis hydraulic units
- available in both 110 and 200 VDC
