

AUT-O-SAFE® is an auxiliary power supply for your elevator that activates automatically when a building loses power.

During a power failure, the Unitec AUT-O-SAFE emergency return unit automatically returns the elevator to the lowest landing and opens the elevator doors to allow passengers to exit.

The “door-open” button remains operative to ensure all passengers exit safely. The elevator then remains parked with the doors closed until normal power is restored.

Features

Designed for Otis microprocessor and LRV2 relay-based hydraulic elevators

Compact, solid-state design

Mounts on any wall

Gel batteries recharge in 18 hours

Diagnostic and monitoring lights

Improves Passenger Safety

The AUT-O-SAFE unit improves safety and provides peace of mind for passengers by preventing entrapments due to power failure.

Cost Effective

This unit is installed quickly with minimal disruption to building tenants making it cost effective vs. alternate solutions.
